

YAML Use-Cases

Scenario 1: Configuration File.

You are tasked with creating a YAML configuration file for a new web application. This configuration file should include the following settings:

Database Configuration:

Define the database connection details with the following attributes:

- **Hostname:** Set the hostname to "**localhost**".
- **Port:** Configure the port to "**3306**".
- **Username:** **myuser**.
- **Password:** **mypassword**.

Application Settings:

Specify the application settings with the following properties:

Application Name: **myapp**.

Debug Mode: should be **true**.
